

ScanFlowStore Connectors

Scan Directly into the Applications That Drive Your Business

Information is a business' lifeblood. To keep business flowing, information needs to be accessible when and where it is needed. However, when that information is locked in a misplaced or misfiled piece of paper, it is useless.

Integrating paper-based information into the applications that drive your business has never been easier than with ScanFlowStore. Push-button simple, ScanFlowStore's User Interface lets users navigate to and select destinations directly from Xerox MFPs. Dynamic, two-way connectivity between ScanFlowStore and your business systems ensure that users are always presented with the same access at the Xerox MFP as they would encounter at their workstation, speeding adoption and eliminating the need for user training. Because of this direct link between the MFP and the application, files scanned and stored from the Xerox MFP are indexed using only those values the application accepts, so the file is stored and indexed correctly the first time, every time. Conditional metadata support expedites indexing documents at the MFP, by presenting only those values associated with earlier metadata selections, saving users' time and reducing errors. Coupling ScanFlowStore connectors with Nuance's unrivaled OmniPage-driven Zonal Optical Character Recognition (OCR) or barcode recognition modules further automates storage and distribution processes and reduces errors associated with manual data entry.

USER BENEFITS

- Save time
- Slash distribution costs
- Ensure accuracy
- Maintain storage standards
- Locate information faster

Learn more at www.scanflowstore.com

Using ScanFlowStore in conjunction with Connectors to the following applications, users can scan directly into the folders, repositories, libraries, collections, etc. from any supported Xerox MFP. Destinations can be either manually entered or selected from the MFP's display screen.

- AccountView—New! Improved handling of large data sets!
- AFAS Profit
- Exact e-Synergy, e- Synergy Enterprise—New! Improved Data Validation!
- Exact Globe
- Lotus Notes
- Microsoft Dynamics CRM
- Microsoft SharePoint—New! Now store to lists! Do more with metadata—Create subfolders or use metadata to populate file name and properties

- Open Text LiveLink ECM—New! Improved support of Personal Workspaces!
- Open Text eDOCS—New! Modify lookup values for valid eDOCS profile values! Browse all folders in eDOCS 5.x! Now supports custom profiles!
- Oracle
- ProLaw
- SQL—New! Improved SQL filtering performance against large databases!
- SQL Express
- SuperOffice
- Unit 4 Multivers
- Worldox—New! Now Supports GX2 and Related Field Lookups!
- Xerox DocuShare
