YSoft and Manufacturing

YSOFT
SAFEQ®

We provided central reporting and accounting, together with printing and copying cost reduction and increase of security of scanned documents.

Introductory Information:

- Absence of printing and copying costs monitoring
- No effective access restriction for printing and copying users
- Absence of departmental charge-back
- No access control to MFDs
- Lack in the MFD availibility
- No way to solve the technical problems from the central

The solution:

- YSoft SafeQ Enterprise edition
- YSoft SafeQ Terminal Professional or YSoft SafeQ Terminal Embedded
- Integration with company Active Directory
- Integration with existing ID card management systems
- YSoft SafeQ Scan Management

The results:

- Central management of all print and copy operations.
- Detailed reports for analysing the printing environment
- Suggesting ways to optimize processes and devices.
- Integration of printing operations with Active Directory
- Possibility of printing jobs from legacy systems.
- True 24x7 operation
- Costs reduction by 20 to 40%
- Return on investment in 14 months.

"Before SafeQ implementation, tons of wasted printed paper were left at printers and MFDs. Thanks to Secured Print and Follow-Me, our printing operations have been opti-mized and the number of wasted pages has been reduced by 30 per-cent."

Customer profile

The customer is a mid-scale manufacturing company in various industries: machinery, elec-tronics, pharmaceuticals, etc. Typically, printers and MFDs are not deployed throughout the entire company, but are concentrated in administration and operation departments. The rest of the printers/MFDs are distributed across various locations. The customer needs to increase and sustain the productivity of key employees and ensure 24x7 operation of the entire print/copy system. The customer wants to optimise the printing environment and reduce costs.

The challenge

The customer is not able to monitor costs associated with printing and copying. The only way to cut costs is to restrict access to printing/copying to selected users. Departmental chargeback is totally impossible. There is no way to control access to MFDs. The availability of MFDs is also a problem. When there is a technical problem with a particular MFD, users must go through the time-consuming process of resubmitting their jobs to a different MFD.

The solution

*   YSoft SafeQ Enterprise edition
*   YSoft SafeQ Terminal Professional or YSoft SafeQ Terminal Embedded
*   Integration with company Active Directory
*   Integration with existing ID card management systems
*   YSoft SafeQ Scan Management

The results

*   The implemented solution addresses all the customer's requirements and provides the fol-lowing benefits:
*   Enables central management of all print and copy operations.
*   Provides detailed reports for analysing the printing environment and suggesting ways to optimize processes and devices.
*   Integrates printing operations with Active Directory, making it possible to print jobs from legacy systems.
*   Enables true 24x7 operation—a benefit of the application cluster in SafeQ Enterprise Edition.
*   The YSoft SafeQ multi-vendor solution enables customers to integrate all their existing devices with the new system, providing precise and accurate accounting and security for all printers/MFDs at all customer sites.
*   Cuts costs by 20 to 40% and delivers a return on investment in 14 months.

Benefits at a glance

*   Central management of all copy and scan jobs.
*   Detailed reporting of printing enviroment.
*   Availability 24/7

Solution specifications

Xerox products supported:

*   Xerox WCP7345 MFPs, Xerox Phaser network printers.

Software:

*   YSoft SafeQ Enterprise Edition

Applications supported:

*   All office applications
*   Windows, Mac, Linux, Unix
*   Legacy and mainframe systems
*   Proprietary applications
